ClearOne®

spontania
Media Collaboration Software

Spontania collaboration cloud replaces those days of expensive and complex infrastructure. Move your technology to the Spontania cloud or implement the Spontania cloud software in your own data center. Allow dozens to thousands of your users to collaborate in real-time, sharing high-quality voice, video and data on any device they choose— from cell phones to standards-based group systems. Welcome to media collaboration.
Key Benefits

+ Low acquisition and operating costs— avoid capitalization of expensive infrastructure and endpoints

+ BYOD-friendly, users can join and host from multiple devices— PCs, handhelds and mobile, softphones, and other standards-based video conferencing systems

+ Interoperable with existing IT and communication environments including standards-based video conferencing equipment, PSTN/IPBX, directory authentication, and scheduling tools

+ Light network footprint—optimizes bandwidth consumption to provide best possible real-time video conferencing quality, dynamically adapted to the bandwidth and device of each participant

+ Firewall, proxy and NAT friendly using standard port for no additional firewall configuration requirements

+ Easy to install, deploy and administer – backend web interface minimizes ongoing administration tasks

+ Simple to use, with intuitive user interface options for audio and video customization

+ Highly secure for even the most confidential video collaboration sessions, fully compliant with enterprise security policies and requirements

+ Compatible with Communication Enabled Business Process (CEBP)

+ Easily scalable with a distributed server

Features

Multimedia Devices

**Standards-Based Endpoints**

Integration to the Workflow
